Re: NEX Exchange Expansion Bldg. 1512  
Contract No. N62473-08-C-7504  
Naval Base Ventura County

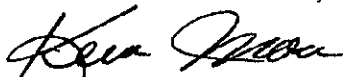

Subj: Letter of Recommendation

Attn Garry Nelson

Penick would like to take this opportunity to acknowledge your firms exceptional involvement in the NEX Expansion project which led to a successful effort on all parts on this interesting endeavor. This project consisted of a 30,000 square foot expansion to an existing operating retail facility for the Navy on a Navy base in Ventura County Ca. The challenge on this project was to construct the expansion with minimal effect to the operation and patrons of the retail space all the while trying to expand the operations of these systems. This required many off store hours work times for GNE which resulted in the seamless addition of these systems. Penick received many comments from the retail facility management of how impressed they were of the absence of disruption of their ongoing store operations while adding these improvements.

GNE was instrumental in helping Penick achieve our goals on this job of good working relations with the onsite retail staff, recognition of all efforts of our subcontracting team by the Navy and timely completion of the overall project. Penick recommends your firm to anyone interests in adding a valuable team member to their construction efforts and looks forward to your involvement in our firm's future projects.

Respectfully,  
T. B. PENICK & SONS, INC.

Subj: Letter of Recommendation

Attn Garry Nelson

This letter is to recognize the outstanding job that your firm did on our St. Mark Presbyterian Church project in Newport Beach California. The requirements for power on the project consisted of seven buildings, the sanctuary building, a fellowship hall, the main administration building and a four building preschool complex. Additionally there was extensive site work covering the 7 acre facility which included campus wide power distribution, parking and landscape lighting, monument signage lighting, and the main plaza and exterior building lighting. Your onsite staff was proactive in achieving the project milestones and completion dates and being an intricate part of problem solving when it came to the electrical portion of the work. As usual with church projects the owners require day to day management to deal with the every changing requests of the congregation and GNE was very helpful when it came to dealing with the electrical, sound, and lighting requests from the owners.

Now that the project is complete and the congregation has had time to fully enjoy their new facility several comments have been made regarding the visual effects the lighting has both on the exterior buildings at night and interior during the events throughout the campus. GNE should take pride with their contribution to this completed religious facility. Penick looks forward to completing more projects with your firm in the future.

Respectfully,  
T. B. PENICK & SONS, INC.
